EURUSD - technical overview

The downtrend off the 2018 high is looking exhausted and the prospect for a meaningful higher low is more compelling. A higher low is now sought out above the multi-year low from 2017, ahead of the next major upside extension. Only a weekly close back below 1.0800 would compromise this outlook. Back above 1.1412 will strengthen the view.

- **R2 1.1180** - 21 October high - Strong
- **R1 1.1117** - 4 December high - Medium
- **S1 1.0981** - 29 November low - Medium
- **S2 1.0941** - 8 October low - Strong

EURUSD - fundamental overview

The Euro made a nice comeback on Tuesday, with a lot of the demand coming from the better than expected German ZEW read. Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision.

EURUSD - Technical charts in detail

[Watch now](#)

GBPUSD - technical overview

The market has seen a recovery out from the lowest levels since 2016, with the price now pushing back above the weekly Ichimoku cloud to signal a bullish structural shift. Ultimately, only back below the 1.2500 handle would compromise the newly established constructive medium and longer-term outlook. Next key resistance comes in the form of the 2019 high from March around 1.3380.

- **R2 1.3215** - 10 December high - Strong
- **R1 1.3200** - 3 May high - Medium
- **S1 1.3102** - 5 December low - Medium
- **S2 1.3000** - Psychological - Strong

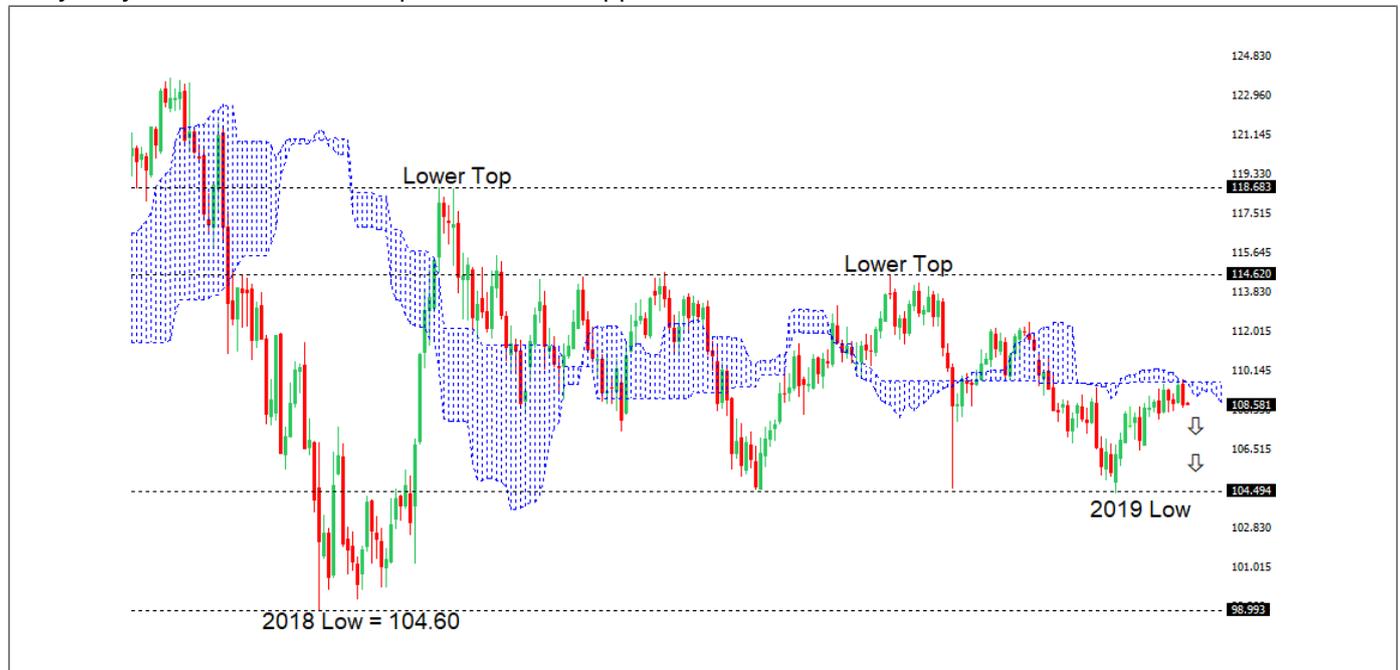

GBPUSD - fundamental overview

Not a great round of economic data out of the UK on Tuesday. UK October GDP was unchanged vs +0.1% f/c, October industrial production rose less than forecast, October manufacturing production increased more than expected, the October trade deficit was larger than anticipated, and October construction output fell more than the median estimate. However, none of this really mattered all that much, with the Pound still extending its run against the Buck to an 8 month high, with the primary focus on expectation for a majority government for the Conservatives after tomorrow's election. Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision.

[Watch now](#)

USDJPY - technical overview

Despite rally attempts, the longer-term downtrend remains firmly intact. Rallies should continue to be well capped below 110.00 on a monthly closes basis, with deeper setbacks anticipated towards a retest of the yearly low, below which exposes critical support in the form of the 2016 low at 99.00 further down.

- **R2 110.00** - Psychological - Strong
- **R1 109.73** - 2 December high - Medium
- **S1 108.43** - 4 December low - Medium
- **S2 108.24** - 14 November low - Strong

USDJPY - fundamental overview

The Yen continues to track with bigger picture macro themes. While President Trump remains optimistic about a trade deal with China, the possibility for a Sunday tariff announcement is still on the table as per US trade advisor, Peter Navarro. On the domestic front, Finance Minister Taro Aso said PM Shinzo Abe 'may need another term as leader of the ruling party to fulfill his plan to change the country's pacifist constitution.' Second tier Japan data has been shrugged off. Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision.

[Watch now](#)

EURCHF - technical overview

The market remains very well capped into offers and the medium-term picture continues to favour the downside. A break back above 1.1060 would be required to take the immediate pressure off the downside. Below 1.0800 exposes the 1.0600 area.

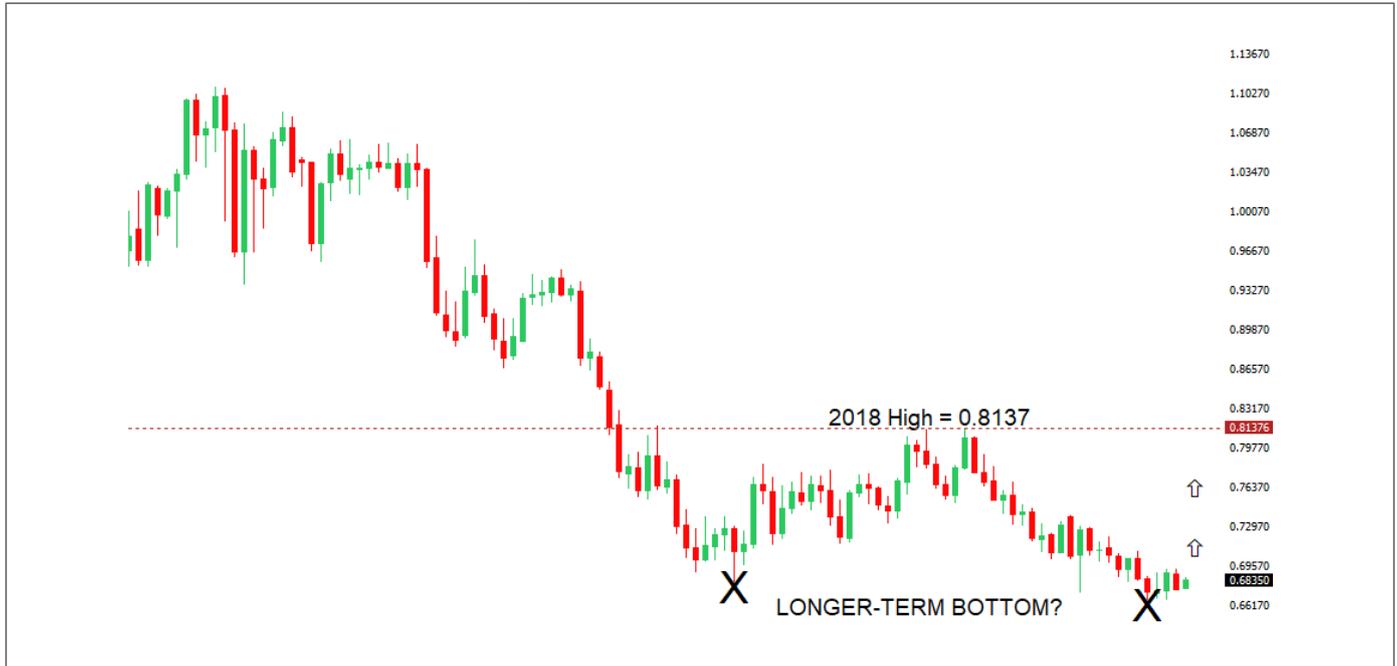

- **R2 1.1173** - 2 July high - Strong
- **R1 1.1060** - 17 October high - Medium
- **S1 1.0864** - 14 November low - Medium
- **S2 1.0811** - 4 September/**2019 low** - Strong

EURCHF - fundamental overview

The SNB remains uncomfortable with Franc appreciation and continues to remind the market it will need to be careful about any attempts at trying to force an appreciation in the currency. But the SNB will also need to be careful right now, as its strategy to weaken the Franc is facing headwinds from a less certain global outlook. Any signs of sustained risk liquidation, will likely invite a very large wave of demand for the Franc that will put the SNB in the more challenging position of needing to back up its talk with action, that ultimately, may not prove to be as effective as it once was, given where we're at in the monetary policy cycle.

AUDUSD - technical overview

The market has been under pressure over the past several months, but has also been well supported on dips. The price action suggests we could be seeing the formation of a major base, though it would take a clear break back above 0.7100 to strengthen this outlook. In the interim, look for setbacks to continue to be well supported above 0.6700 on a weekly close basis.

- **R2 0.6930** - 31 October high - Strong
- **R1 0.6863** - 3 December high - Medium
- **S1 0.6800** - Figure - Medium
- **S2 0.6754** - 29 November low - Strong

AUDUSD - fundamental overview

Absence of first tier data out of Australia has left Aussie looking to bigger picture themes. We've been getting conflicting reports from the trade front. President Trump has been sounding optimistic about prospects for a trade deal with China, but at the same time, Peter Navarro, trade advisor to President Trump, said that he "has no indication" the December tariffs won't be implemented and "it's up to the Chinese whether we get a deal." Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision.

USDCAD - technical overview

The longer-term structure remains constructive, with dips expected to be well supported for renewed upside, eventually back above the 2018/multi-month high at 1.3665. At this point, only a weekly close below the psychological barrier at 1.3000 would compromise this outlook.

- **R2 1.3328** - 20 November high - Strong
- **R1 1.3270** - 6 December low - Medium
- **S1 1.3158** - 5 December low - Strong
- **S2 1.3115** - 5 November low - Strong

USDCAD - fundamental overview

An interesting week for the Canadian Dollar, which has managed to recover, despite last Friday's awful Canada employment data and Monday's softer Canada housing starts and building permits. It seems profit taking, broad based selling in the US Dollar and some demand for OIL, have all helped to offset offers in the Loonie. Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision. Canada capacity utilisation is due, but will be looked over on account of the US calendar risk.

NZDUSD - technical overview

Despite recent weakness, there's a case to be made for a meaningful bottom, with the market rallying out from longer-term cycle low area around 0.6200. As such, look for setbacks to be well supported in the days ahead, in anticipation of a continued recovery. Only a weekly close below 0.6200 would give reason for rethink. Back above 0.6500 strengthens the outlook and takes the immediate pressure off the downside.

- **R2 0.6600** - Figure - Medium
- **R1 0.6589** - 6 August high - Strong
- **S1 0.6466** - 4 November high - Medium
- **S2 0.6424** - 2 December low - Strong

NZDUSD - fundamental overview

The New Zealand Dollar is showing disappointment in the fact that fresh fiscal spending will be spread out over the next few years rather than being front-loaded, which means that any meaningful boost may only arrive between 2020-2021, despite existing capacity constraint concerns. Looking ahead, the focus will be on US inflation data and the always anticipated FOMC decision.

US SPX 500 - technical overview

There have been signs of a major longer term top, after an exceptional run over the past decade. Any rallies from here, are expected to be very well capped, in favour of renewed weakness targeting an eventual retest of strong longer-term previous resistance turned support in the form of the 2015 high at 2140. The initial level of major support comes in at 3070, with a break below to strengthen the outlook. A monthly close above 3200 would be required to compromise the outlook.

- **R2 3200** - Psychological - Strong
- **R1 3159** - 2 December/**Record high** - Medium
- **S1 3070** - 3 December low - Medium
- **S2 3000** - Psychological - Strong

US SPX 500 - fundamental overview

Although we've seen the market extending to fresh record highs in 2019, with so little room for additional central bank accommodation, given an already depressed interest rate environment, the prospect for a meaningful extension of this record run, on easy money policy incentives, should no longer be as enticing to investors as it once was. Meanwhile, tension on the global trade front should continue to be a drag on investor sentiment despite any signs that would suggest otherwise. We recommend keeping a much closer eye on the equities to ten year yield comparative going forward, as the movement here is something that could be a major stress to the financial markets looking out.

GOLD (SPOT) - technical overview

The 2019 breakout above the 2016 high at 1375 was a significant development, and suggests the market is in the early stages of a bullish move that follows a multi-month consolidation. The next major level of resistance comes in around 1600, while in the interim, look for any setbacks to be well supported above 1400.

- **R2 1558** - 4 September/2019 high - Strong
- **R1 1536** - 24 September high - Medium
- **S1 1445** - 12 November low - Medium
- **S2 1400** - Psychological - Strong

GOLD (SPOT) - fundamental overview

The yellow metal continues to be well supported on dips with solid demand from medium and longer-term accounts. These players are more concerned about exhausted monetary policy, extended global equities, political uncertainty, systemic risk and trade war threats. All of this should keep the commodity well supported, with many market participants also fleeing to the hard asset as the grand dichotomy of record high equities and record low yields comes to an unnerving climax.

BTCUSD - technical overview

The market continues to correct in the aftermath of a major surge in the second quarter of 2019. However, any setbacks should be very well supported in the 6,000 area, with an higher low sought out in favour of a bullish continuation back above the 2019 high and towards the record high from late 2017 further up. Ultimately, only a weekly close below 6,000 would compromise the constructive outlook.

- **R2 10,468**- 26 October high - Strong
- **R1 8,806** - 11 October high - Medium
- **S1 6,500** - Psychological - Strong
- **S2 5,755** - Internal support/June 2018 - Strong

BTCUSD - fundamental overview

Bitcoin is going through a period of technical adjustment after the fierce Q2 run up, though we anticipate continued demand from institutional players starved for yield in a world where global equities are increasingly vulnerable. Plenty of demand is reported on dips down towards \$6,000.

BTCUSD - Technical charts in detail

[Watch now](#)

ETHUSD - technical overview

The market is in the process of a major correction after a surge in the second quarter of 2019. Look for setbacks to be well supported above of previous resistance turned support at 100 on a weekly close basis, in favour of the next major higher low and bullish resumption back towards and through the 2019 high up at 363. Ultimately, only a weekly close below 100 would compromise the outlook.

- **R2 225** - 19 September high - Strong
- **R1 200** - Psychological - Medium
- **S1 133** - 25 November low - Medium
- **S2 102** - 6 February/2019 low - Strong

ETHUSD - fundamental overview

Profit taking in the aftermath of the rapid Q2 appreciation has triggered a healthy period of correction and consolidation, while critique of the space from the likes of President Trump and Fed Chair Powell, along with worry associated with fallout in the global economy, are stories that could continue to keep the more risk correlated crypto asset weighed down into the end of the year. Risk off in the global economy is expected to result in ETH underperformance relative to Bitcoin.
