Risk markets extended, but still feeling good [Wake-up call](#)

Risk markets have another reason to feel good after China trade data came in strong, and US equity futures have reflected as such, extending the run of record gains. Still, things are getting a little crazy and there has been some caution given how extended we're looking.

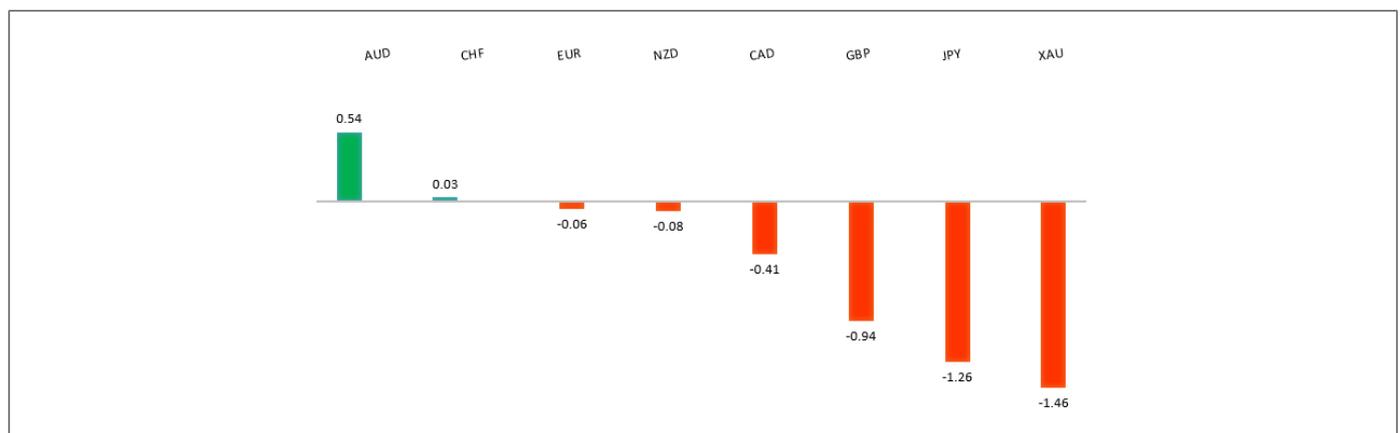

Technical highlights [Daily Video](#)

- [EURUSD](#) Carving out longer term bottom
- [GBPUSD](#) Setbacks should be well supported
- [USDJPY](#) Additional upside should be limited
- [EURCHF](#) Confined to tighter consolidation
- [AUDUSD](#) Room for recovery to extend
- [USDCAD](#) Breaks down to multi-month low
- [NZDUSD](#) Slow and steady recovery in works
- [US SPX 500](#) Uptrend begging for correction
- [GOLD](#) (spot) Fresh upside extension underway
- [BTCUSD](#) Constructive while above 6,000
- [ETHUSD](#) Solid support zone around 100

Fundamental highlights

- [EURUSD](#) ECB Mersch on the wires today
- [GBPUSD](#) Soft UK data adds to GBP drag
- [USDJPY](#) Favourable risk dynamics weaken Yen
- [EURCHF](#) SNB faces tougher battle with Franc
- [AUDUSD](#) Aussie gets boost from China trade
- [USDCAD](#) OIL decline weighs on Loonie
- [NZDUSD](#) Kiwi suffers from soft building permits
- [US SPX 500](#) Stocks more sensitive to downside risk
- [GOLD](#) (spot) Pick up in hard asset demand
- [BTCUSD](#) More institutional demand expected
- [ETHUSD](#) Ether exposed to traditional markets

5 Day Performance vs. US dollar

EURUSD - technical overview

The downtrend off the 2018 high is looking exhausted and the prospect for a meaningful higher low is more compelling. A higher low is now sought out above the multi-year low from 2017, ahead of the next major upside extension. Only a weekly close back below 1.0800 would compromise this outlook. Back above 1.1412 will strengthen the view.

- **R2 1.1250** - 6 August high - Strong
- **R1 1.1239** - 31 December high - Medium
- **S1 1.1085** - 10 January low - Medium
- **S2 1.1066** - 20 December low - Strong

EURUSD - fundamental overview

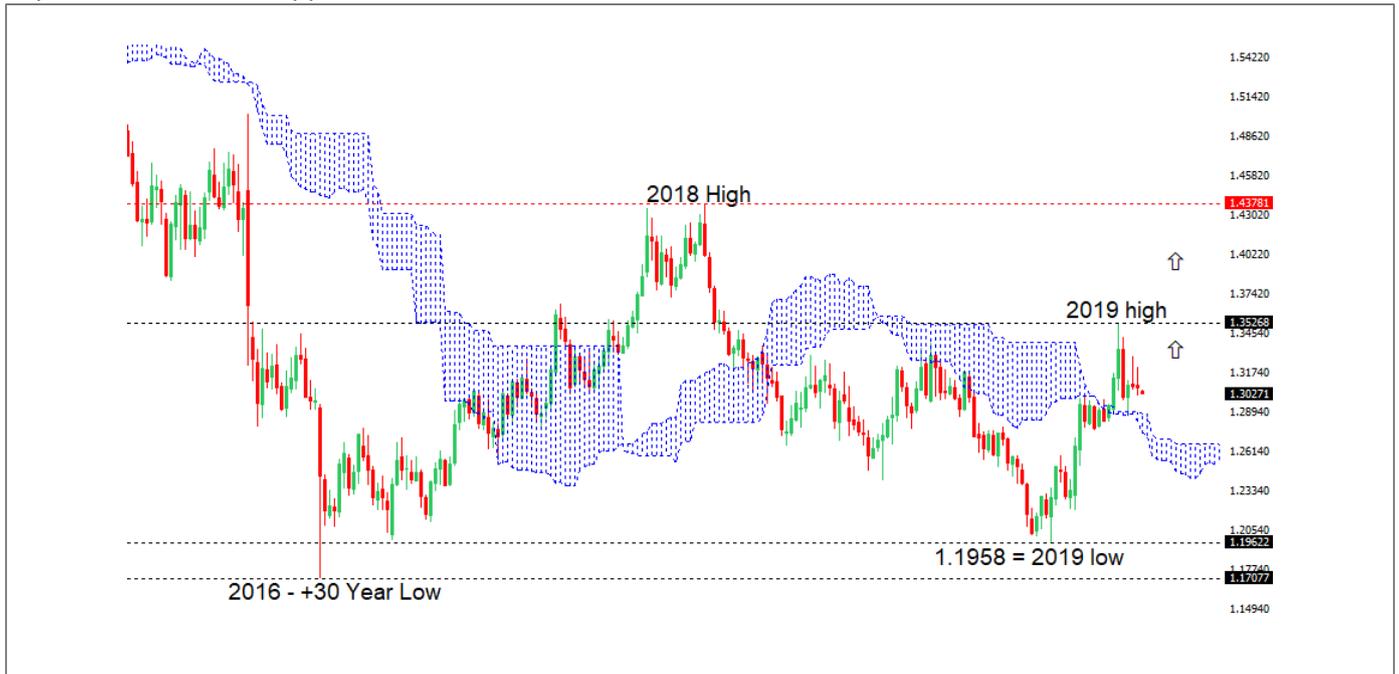

The Euro has found another wave of demand into the latest round of weakness, with the single currency mostly propped back up on the back of Friday's softer than expected US jobs report. ECB President Christine Lagarde asked policy makers to 'refrain from publicly discussing the institution's impending strategy review and its parameters' ahead of her formal announcement on 23 January. Germany reported a record budget surplus of EUR13.5 bln in 2019, and Germany December wholesale prices fell 1.3% YoY vs -2.5% in November. Italy November retail sales dropped 0.2% and the October figure was revised lower from -0.2% to -0.3%. Looking ahead, we get a speech from ECB Mersch, US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front.

EURUSD - Technical charts in detail

[Watch now](#)

GBPUSD - technical overview

The market has seen a recovery out from the lowest levels since 2016, with the price now pushing back above the weekly Ichimoku cloud to signal a bullish structural shift. Ultimately, only back below the 1.2500 handle would compromise the newly established constructive medium and longer-term outlook. Next key resistance comes in the form of the monthly high from September 2017 at 1.3658, with setbacks expected to be well supported ahead of 1.2800.

- **R2 1.3300** - Figure - Strong
- **R1 1.3285** - 31 December high - Medium
- **S1 1.2961** - 13 January low - Medium
- **S2 1.2905** - 23 December low - Strong

GBPUSD - fundamental overview

The Pound remains under pressure into this week, with the UK currency unable to get much help from last Friday's softer US jobs report. Last week's downbeat comments from outgoing BOE Governor Carney, along with worry associated with trade talks between the EU and UK, have factored into weakness, while Tuesday softer batch of UK data hasn't helped. Looking ahead, we get US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front. There is no first tier data on the UK calendar.

[Watch now](#)

USDJPY - technical overview

Despite rally attempts, the longer-term downtrend remains firmly intact. Rallies should continue to be well capped below 110.00 on a monthly closes basis, with deeper setbacks anticipated towards a retest of the yearly low, below which exposes critical support in the form of the 2016 low at 99.00 further down. Next major support comes in the form of the October 2018 low at 106.48. Only back above the 112.40, 2019 high would compromise the bearish outlook.

- **R2 110.68** - 21 May high - Strong
- **R1 110.22** - 14 January high - Strong
- **S1 109.01** - 9 January low - Medium
- **S2 107.65** - 8 January low - Strong

USDJPY - fundamental overview

Japan returns from holiday with the Yen under pressure as risk appetite remains robust. US equities have extended their record run, taking USDJPY along for the ride, through an important barrier at 110.00. Tuesday's impressive trade data out of China has also contributed to the latest round of bids in the major pair, though offers are reported above 110.00. The BOJ left purchases unchanged at today's regular bond purchase operation. Looking ahead, we get US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front.

[Watch now](#)

EURCHF - technical overview

The market remains very well capped into offers and the medium-term picture continues to favour the downside. A break back above 1.1060 would be required to take the immediate pressure off the downside. Below 1.0800 exposes the 1.0600 area.

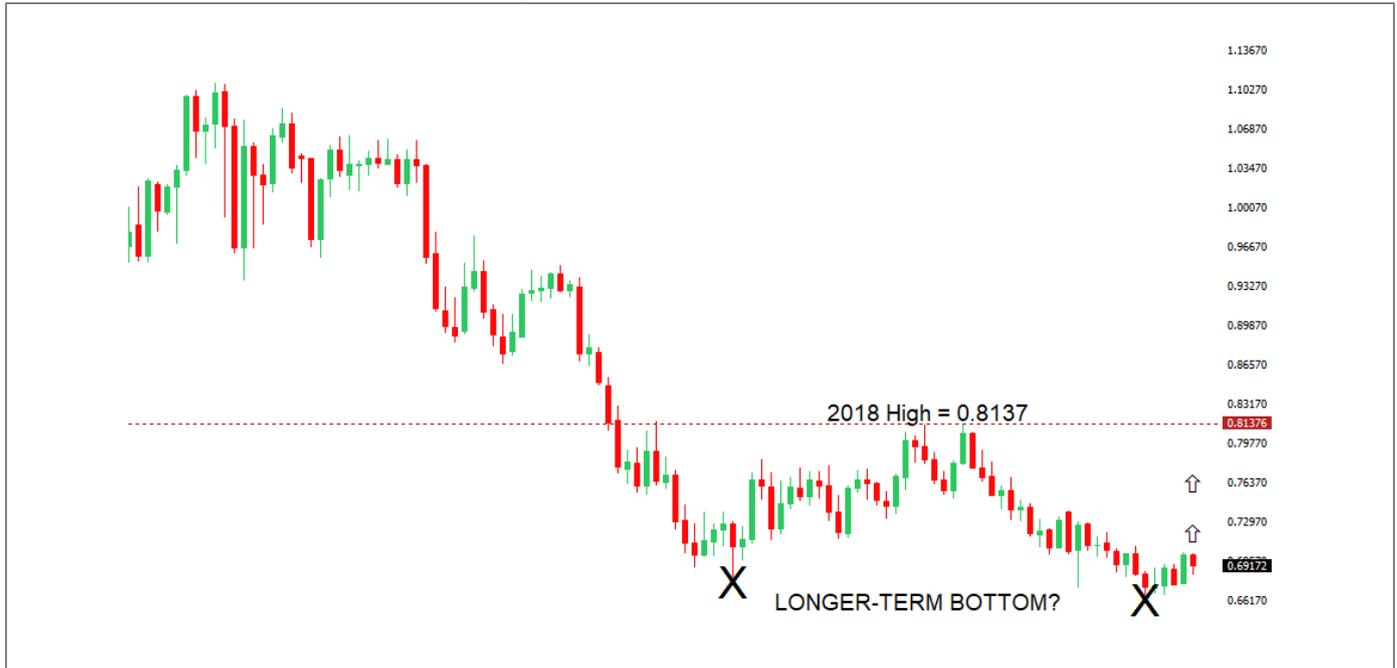

- **R2 1.1060** - 17 October high - Strong
- **R1 1.0906** - 27 December high - Medium
- **S1 1.0783** - 8 January/2019 low - Medium
- **S2 1.0700** - Figure - Strong

EURCHF - fundamental overview

The SNB remains uncomfortable with Franc appreciation and continues to remind the market it will need to be careful about any attempts at trying to force an appreciation in the currency. But the SNB will also need to be careful right now, as its strategy to weaken the Franc is facing headwinds from a less certain global outlook. Any signs of risk liquidation in 2020, will likely invite a very large wave of demand for the Franc that will put the SNB in the more challenging position of needing to back up its talk with action, that ultimately, may not prove to be as effective as it once was, given where we're at in the monetary policy cycle.

AUDUSD - technical overview

The market has been under pressure over the past several months, but has also been well supported on dips. The price action suggests we could be seeing the formation of a major base, though it would take a clear break back above 0.7100 to strengthen this outlook. In the interim, look for setbacks to continue to be well supported above 0.6700 on a weekly close basis.

- **R2 0.7032** -31 December high - Strong
- **R1 0.6958** - 6 January high - Medium
- **S1 0.6850** - 8 January low - Medium
- **S2 0.6838** - 17 December low - Strong

AUDUSD - fundamental overview

A recovery in the Australian Dollar, largely fueled by last week's softer US jobs report and a concurrent surge in US equities, has been helped along even more on Tuesday, after China traded came in much better than expected. Looking ahead, we get US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front.

USDCAD - technical overview

The downturn in late 2019 has resulted in a medium-term shift in the trend, with the pressure back on the downside. The break back below major psychological support at 1.3000 now exposes deeper setbacks towards the 1.2782 low from September 2018. At this stage, the market would need to push back above the November 2019 high at 1.3328 to take the immediate pressure off the downside.

- **R2 1.3182** - 20 December high - Strong
- **R1 1.3105** - 9 January high - Medium
- **S1 1.3000** - Psychological - Strong
- **S2 1.2952** - 31 December/2019 low - Strong

USDCAD - fundamental overview

The Canadian Dollar hasn't been able to muster much positive momentum, despite the well received Canada jobs data in the previous week. A sharp pullback in the price of OIL has unquestionably been an offsetting variable. Monday's business activity outlook survey produced mixed results and hasn't factored into price action. Looking ahead, we get US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front. There is no first tier data on the Canada calendar.

NZDUSD - technical overview

There's a case to be made for a meaningful bottom, with the market rallying out from longer-term cycle low area around 0.6200. As such, look for setbacks to be well supported in the days ahead, in anticipation of a continued recovery. Only a weekly close below 0.6200 would give reason for rethink. Back above 0.6800 strengthens the outlook and takes the medium to longer-term pressure off the downside.

- **R2 0.6756** - 31 December high - Strong
- **R1 0.6700** - Figure - Medium
- **S1 0.6600** - Figure - Medium
- **S2 0.6554** - 18 December low - Strong

NZDUSD - fundamental overview

The New Zealand Dollar has been better supported in recent sessions, though hasn't been able to capitalize as much from Tuesday's much better than expected trade data out of China. This because of the disappointing New Zealand building permits showing. Looking ahead, we get US inflation reads and a Fed Williams appearance. We also will get more updates from the US-China trade front.

US SPX 500 - technical overview

There have been signs of a major longer term top, after an exceptional run over the past decade. Any rallies from here, are expected to be very well capped, in favour of a major correction targeting an eventual test of the 2018 low at 2339. The initial level of major support comes in at 3070, with a break below to strengthen the outlook. A monthly close above 3300 would be required to compromise the outlook.

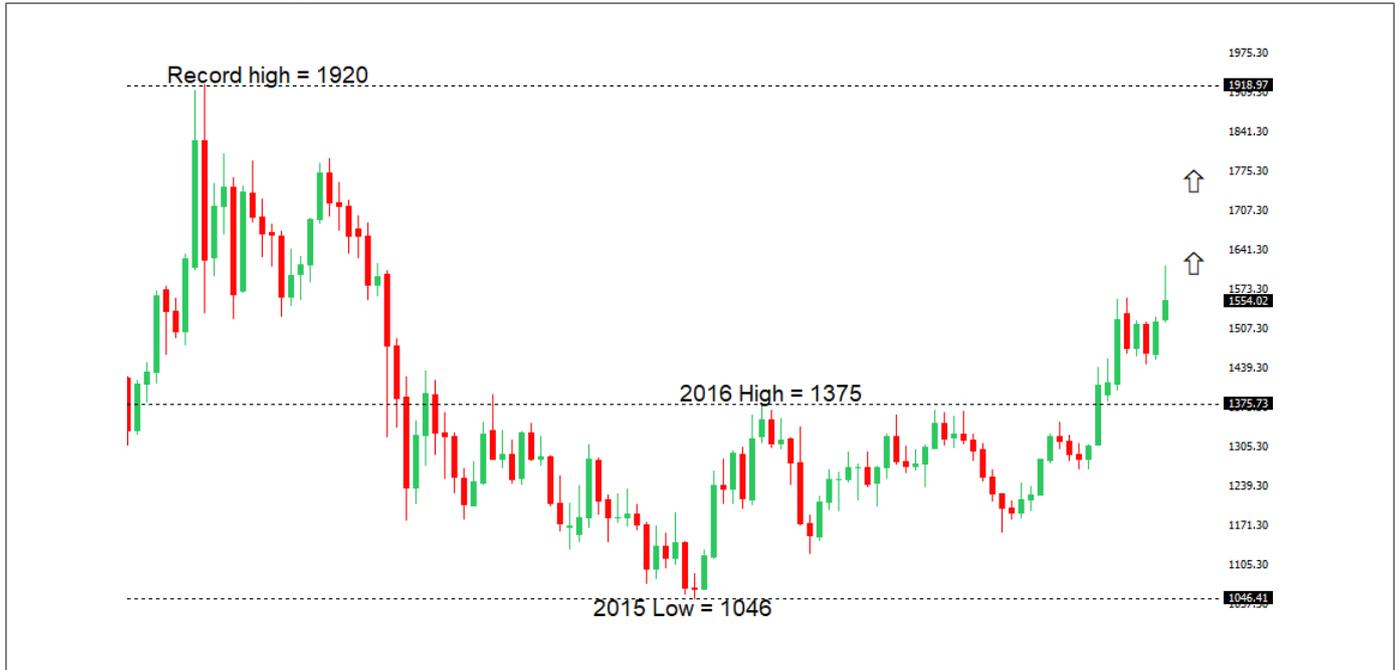

- **R2 3300** - Psychological - Strong
- **R1 3298** - 14 January/Record high - Strong
- **S1 3200** - Psychological - Medium
- **S2 3070** - 3 December low - Strong

US SPX 500 - fundamental overview

Although we've seen the market extending to fresh record highs, with so little room for additional central bank accommodation, given an already depressed interest rate environment, the prospect for a meaningful extension of this record run, on easy money policy incentives, should no longer be as enticing to investors as it once was. Meanwhile, tension on the global trade front and geopolitical risk, should continue to be a drag on investor sentiment into 2020, despite any signs that would suggest otherwise. We recommend keeping a much closer eye on the equities to ten year yield comparative going forward, as the movement here is something that could be a major stress to the financial markets looking out.

GOLD (SPOT) - technical overview

The 2019 breakout above the 2016 high at 1375 was a significant development, and suggests the market is in the early stages of a bullish move that follows a multi-month consolidation. The next major level of resistance comes in around 1650 (measured move extension target), while in the interim, look for any setbacks to be well supported above 1400.

- **R2 1650** - Measured move target - Strong
- **R1 1612** - 8 January/2019 high - Medium
- **S1 1500** - Psychological - Medium
- **S2 1445** - 12 November low - Strong

GOLD (SPOT) - fundamental overview

The yellow metal continues to be well supported on dips with solid demand from medium and longer-term accounts. These players are more concerned about exhausted monetary policy, extended global equities, political uncertainty, systemic risk and trade war threats. All of this should keep the commodity well supported, with many market participants also fleeing to the hard asset as the grand dichotomy of record high equities and record low yields comes to an unnerving climax.

BTCUSD - technical overview

Setbacks should be very well supported in the 6,000 area, with a higher low sought out in favour of a bullish continuation back above the 2019 high and towards the record high from late 2017 further up. Ultimately, only a weekly close below 5,750 would compromise the constructive outlook. Back above 10,468 further encourages bullish prospect.

- **R2 10,468** - 26 October high - Strong
- **R1 9,000** - Round number - Medium
- **S1 7,000** - Psychological - Strong
- **S2 6,430** - 18 December low - Strong

BTCUSD - fundamental overview

Bitcoin demand is expected to pick up in 2020, with market forces to likely make a stronger argument for the emerging cryptocurrency. In a world where rates are at historic lows and the equity market looks to be inching closer to major capitulation, the idea of owning a decentralised, limited supply currency, becomes increasingly attractive as a store of value. Moreover, there is plenty of development going on in the decentralised technology space, which should only add to the draw.

BTCUSD - Technical charts in detail

[Watch now](#)

ETHUSD - technical overview

The market is in the process of a major correction after a surge in the second quarter of 2019. Look for setbacks to be well supported above of previous resistance turned support at 100 on a weekly close basis, in favour of the next major higher low and bullish resumption back towards and through the 2019 high up at 363. Ultimately, only a weekly close below 100 would compromise the outlook.

- **R2 225** - 19 September high - Strong
- **R1 200** - Psychological - Medium
- **S1 117** - 18 December low - Medium
- **S2 102** - 6 February/2019 low - Strong

ETHUSD - fundamental overview

There is plenty of Ether demand built up in the 80-100 area, with so much optimism around prospects for the blockchain given all of the development going on in the decentralised finance space. At the same time, macroeconomics will likely play a negative role in 2020, at least relative to the price of Bitcoin, with Eth expected to underperform in a risk off backdrop, in light of Ethereum's higher sensitivity and correlation with risk themes.
